

Missing Millions CRM Upgrade

Harcourts Ulverstone & Penguin

Project Documentation & Technical Handoff Package

Prepared for portfolio, stakeholder review, and future development planning

Project Snapshot

Field	Details
Project Name	Missing Millions CRM - Harcourts Real Estate CRM Upgrade
Client	Harcourts Ulverstone & Penguin
Product Type	Internal real estate CRM, prospecting intelligence, and pipeline management platform
Purpose	Upgrade the existing Missing Millions workflow into a full CRM that helps the agency identify missed listings, clean database quality issues, track owner relationships, and protect future GCI opportunities.
Primary Users	Agency owners, sales managers, real estate agents, administrators, and operations staff.
Core Data Sources	VaultRE database audit, REA listing extract/scanner, user-entered contact notes, pipeline dates, prospect owner records, market area/precinct data.

1. Executive Summary

Missing Millions is positioned as an internal real estate workflow and CRM intelligence system for Harcourts Ulverstone & Penguin. The current project direction is to evolve the existing Missing Millions app from a listing/prospect tracking utility into a scalable, operational CRM that the agency can use daily to protect revenue, improve contact discipline, and manage seller pipeline activity across core market areas.

The audit data shows the business problem clearly: the office has thousands of database records, duplicate contacts, incomplete contact records, under-processed enquiries, and limited notes capturing relationship activity. The CRM upgrade should therefore focus not only on capturing property data, but also on enforcing better prospect ownership, notes, follow-up dates, data cleanup, and visibility into missed GCI opportunities.

2. Business Problem

- The agency has a large contact database, but many contacts are incomplete, duplicated, or not actively managed.
- Prospective vendor and property records are not consistently tied to structured follow-up workflows.
- Market opportunities can be missed when properties come to market with another agency but were already inside the office database.
- Connection calls and relationship-building activity are not consistently recorded as notes.
- VaultRE holding area enquiries may not be processed quickly enough into usable owner/prospect records.
- Managers need clearer reporting on duplicates, missing contact fields, owner counts, prospect listings, precinct coverage, and pipeline dates.

3. Audit-Based Findings

Metric	Audit Finding
Total contacts in database	Circa 11,427 contacts
Contacts with email address	8,661
Contacts with phone number	10,055
Contacts without email or phone	478
Duplicate contacts	1,769
Prospective vendor contacts	2,377
Core market homes	6,307 homes across Ulverstone and Penguin
Prospect/Not Currently Listed records	1,041 homes entered as Prospect/Not Currently Listed
Unprocessed holding area enquiries	3,872 enquiries noted in holding area as of audit reference date

Market Area	Prospect Listings in VaultRE	Total Homes in Marketplace	Avg Sale Price	Avg GCI
Ulverstone	702	4,017	\$521,712	\$11,921
Penguin	339	2,290	\$475,044	\$11,115

Market Area	Turnover	Opportunities Based on Turnover	GCI Opportunity
Ulverstone	3.66%	25.7	\$306,242.39
Penguin	2.88%	9.8	\$108,596.95

Market Area	New Listings to Market	Listed by HM	Lost in Database	Not in Database	Missed GCI
Ulverstone	59	12	19	23	\$226,499
Penguin	31	41	10	6	\$111,150
Total	90	53	29	29	\$337,649

4. Product Description

The Missing Millions CRM upgrade is a real estate revenue intelligence and prospecting platform. It connects external market signals, such as REA listings, with internal CRM data from VaultRE so the agency can see where listings are being won, lost, or missed. The platform should help users capture property opportunities, identify whether the property/contact already exists in VaultRE, classify the owner relationship, and trigger the next appropriate action.

- Capture live property listings from REA via scanner or bookmarklet workflow.
- Compare public listings against VaultRE property/contact records.
- Flag whether a property is already in the database, missing from the database, or listed by another agency.
- Track missed GCI and lost opportunity categories.
- Create structured prospect owner workflows with status, notes, dates, agent ownership, and follow-up cadence.
- Surface database quality issues: duplicates, missing email, missing phone, incomplete owner links, unprocessed holding area enquiries.
- Support sales managers with office-level reporting and agent accountability dashboards.

5. Target Market and Users

User Group	Needs
Agency Owners / Principals	High-level visibility into missed GCI, market coverage, database quality, agent activity, and future pipeline.
Sales Managers	Pipeline control, accountability reporting, duplicate cleanup, notes compliance, and follow-up tracking.
Agents / Property Consultants	A daily workflow for prospect owners, conversations, follow-ups, market watch, listing opportunities, and seller timeline movement.
Admin / Operations Staff	Tools to process holding area enquiries, clean duplicate records, complete missing fields, and prepare prospect records.
Future Market Expansion Users	Other real estate offices that need a similar REA-to-CRM revenue intelligence workflow.

6. Core CRM Modules

Module	Description
Dashboard	Office-level summary of missed GCI, new listings, database match status, pipeline count, duplicate count, and overdue follow-ups.
REA Scanner / Bookmarklet	Capture live property listings from realestate.com.au and send structured listing data into Missing Millions.
Property Intelligence	Match captured properties against VaultRE records and classify as listed by Harcourts, lost in database, not in database, or needs review.
Contact & Owner Records	Store owner/contact links, status, communication history, agent ownership, contact completeness, and duplicate warnings.
Prospect Pipeline	Track seller timeline stages: not ready to sell, consideration, on the market, listing presentation, and stock management.
Notes & Activity Logging	Require every meaningful contact with an owner to be recorded as a note, with date, agent, channel, and next step.
Follow-Up Dates	Create date-driven pipeline visibility for future seller opportunities.
Holding Area Processing	Queue and process unhandled VaultRE enquiries into usable contacts/prospects.
Precinct / Farming Areas	Map agent territories and farming areas using precinct logic.
Reports	Generate reports on duplicates, missing email, missing phone, owners, prospect listings, holding area, missed GCI, and agent pipeline health.

7. Current Data Extract Summary

The current REA extract file dated 10 April 2026 contains listing-level fields that can support scanner ingestion and market monitoring. Fields include status, address, suburb, post code, agency, listing date, listing price, VaultRE checks, agent contact, days on market, and URL.

Extract Summary	Value
-----------------	-------

Total rows in REA extract	25
Statuses found	For Sale: 23, Under Offer: 2
Top agencies by count	Harcourts Ulverstone & Penguin: 13, One Agency - BURNIE: 2, Ulverstone Real Estate - WEST ULVERSTONE: 2, Roberts Real Estate - Ulverstone: 2, Halliwell Property Agents - DEVONPORT: 2
Top suburbs by count	Ulverstone: 7, West Ulverstone: 5, Penguin: 5, Turners Beach: 5, Sulphur Creek: 1

Status	Address	Suburb	Agency	Price	VaultRE Property Check
For Sale	2/17 Griffin Place	Sulphur Creek	Harcourts Ulverstone & Penguin	Offers Over \$599,000	TBA
For Sale	7 Winforton Avenue	Heybridge	One Agency - BURNIE	FOR SALE	TBA
Under Offer	7 Jerling St	West Ulverstone	Ulverstone Real Estate - WEST ULVERSTONE	From \$550,000	TBA
For Sale	6A Adina Ct	Penguin	Ulverstone Real Estate - WEST ULVERSTONE	From \$750,000	TBA
For Sale	1-4/35 Jermyn Street	Ulverstone	Harcourts Ulverstone & Penguin	\$675,000 - \$695,000	TBA
For Sale	1/27 Main Road	Penguin	Harcourts Ulverstone & Penguin	Offers Over \$850,000	TBA

8. Recommended Tech Stack

Layer	Recommended Stack	Reason
Frontend	Next.js App Router, React, TypeScript	Fast development, scalable routing, server/client component support, strong SaaS portfolio alignment.
UI System	Tailwind CSS, shadcn/ui, Radix UI	Modern enterprise UI, fast iteration, reusable CRM components.
Database	Supabase PostgreSQL	Relational CRM data, reporting queries, auth integration, row-level security.
Authentication / Access	Supabase Auth + RBAC	Agent/admin/manager role control and future multi-agency tenancy.
Backend APIs	Next.js Route Handlers / Server Actions	Centralized secure logic for ingestion, matching, reports, and workflow updates.
Automation	Supabase Edge Functions / scheduled jobs	Recurring listing imports, data cleanup tasks, follow-up reminders, reporting snapshots.
Data Ingestion	REA Scanner, browser bookmarklet, CSV upload, future API/scrapper pipeline	Supports current workflow while allowing progressive automation.
CRM Integration	VaultRE import/export or API integration where available	Keeps Missing Millions aligned with the agency's existing CRM source

		of truth.
Reporting	PostgreSQL views/materialized views, dashboard components, CSV/PDF exports	Fast management reporting and audit visibility.
Hosting	Vercel + Supabase	Reliable deployment pattern for Next.js and Supabase apps.

9. Suggested Data Model

Entity	Purpose
agencies	Top-level tenant or office profile, e.g., Harcourts Ulverstone & Penguin.
users	Authenticated platform users: agents, managers, admin.
roles / permissions	Control what each user can view, edit, export, or approve.
contacts	People records from VaultRE or manual entry.
properties	Property records with address, suburb, post code, owner links, market area, and VaultRE reference.
ownership_links	Many-to-many relationship between contacts and properties.
listings	Captured public market listings from REA/scanner/extract.
listing_matches	Matching result between public listing and internal CRM property/contact records.
prospects	Seller pipeline records tied to owners/properties.
activities / notes	Calls, SMS, emails, meetings, appraisal conversations, and relationship notes.
follow_ups	Date-based reminders and next actions.
precincts	Farming areas and agent territories.
holding_area_items	Queue of unprocessed enquiries requiring action.
audit_logs	Governance record of imports, edits, status changes, and ownership changes.

10. Workflow Design

10.1 REA Listing Capture Workflow

- Agent/admin scans a live REA listing or imports a daily listing extract.
- System stores listing details: address, suburb, agency, status, listing date, price, URL, and days on market.
- System checks whether the property exists in VaultRE/Missing Millions.
- System checks whether the owner contact exists and whether the record has enough contact details.
- System classifies listing: Harcourts listing, lost in database, not in database, needs review, duplicate risk, or unknown.
- System calculates estimated missed GCI where applicable.
- System creates a next action for agent/admin follow-up.

10.2 Seller Pipeline Workflow

- Every core market property should have a prospect status and owner contact linked where possible.
- Agents add notes for every meaningful connection or conversation.
- Agents set pipeline dates and expected seller timing.

- Managers monitor owner stages: not ready to sell, consideration, on the market, listing presentation, stock management.
- Overdue follow-ups and silent prospects are escalated through reports.

10.3 Database Hygiene Workflow

- Identify duplicates by phone, email, name/address, or VaultRE IDs.
- Flag contacts missing email, phone, or linked property.
- Route holding area enquiries into a processing queue.
- Assign admin/agent ownership and SLA due dates.
- Track cleanup progress in dashboards.

11. Implementation Phases

Phase	Focus	Deliverables
Phase 1	Foundation and data model	CRM schema, Supabase project, RBAC, core records: contacts, properties, listings, prospects, notes.
Phase 2	REA scanner and listing intelligence	CSV import, scanner/bookmarklet ingestion, listing classification, matching rules, missed GCI calculations.
Phase 3	CRM workflow upgrade	Prospect pipeline, notes, follow-up dates, owner/property linking, holding area processing.
Phase 4	Reporting and accountability	Dashboards for duplicates, missing data, owners, prospect listings, holding area, missed GCI, pipeline dates, agent activity.
Phase 5	VaultRE integration hardening	Bi-directional reference sync or controlled import/export, data mapping, dedupe rules, audit logs.
Phase 6	Scale and productization	Multi-agency architecture, reusable onboarding, territory/precinct modules, alerting, scheduled scans, export packages.

12. Portfolio Positioning

Use this description in a technical portfolio or proposal:

Built and planned a real estate CRM and revenue intelligence system for Harcourts Ulverstone & Penguin that connects public market listings with internal CRM data to identify missed listings, database gaps, duplicate records, follow-up failures, and lost GCI opportunities. The system is designed around Next.js, TypeScript, Supabase, REA listing ingestion, VaultRE data workflows, and role-based CRM reporting for agents, managers, and administrators.

13. Key Success Metrics

- Reduction in duplicate contacts over time.
- Increase in properties entered as Prospect/Not Currently Listed.

- Increase in contacts with complete email and phone details.
- Reduction in unprocessed holding area enquiries.
- Increase in owner records with notes and follow-up dates.
- Reduction in missed GCI from contacts already in the database.
- Improved visibility of pipeline opportunities by agent, suburb, and precinct.

14. Risks and Controls

Risk	Control
Duplicate or conflicting owner records	Use duplicate detection, merge workflow, and manager approval for ownership changes.
Inconsistent note-taking by agents	Require notes and next-action fields before moving a prospect status forward.
VaultRE remains source of truth but data is incomplete	Use Missing Millions as an intelligence/workflow layer while syncing references carefully.
REA scraping or data capture limitations	Support CSV upload and bookmarklet workflow first, then automate progressively.
Pipeline becomes another unused CRM	Design the UI around daily agent actions and manager accountability dashboards.
Sensitive customer/property data	Apply RBAC, RLS, audit logs, and least-privilege access controls.

15. Source Materials Used

- Missing Millions Presentation.pdf - VaultRE database audit and opportunity analysis for Harcourts Ulverstone & Penguin.
- rea-extract-2026-04-10 (2).csv - REA listing extract sample with listing status, address, suburb, agency, price, VaultRE check columns, days on market, and URLs.
- Existing project direction provided in conversation: Missing Millions app, REA scanner/bookmarklet, VaultRE workflow, and full CRM upgrade objective.
